## SUMMARY

I am a responsible and motivated web developer with a strong foundation in front-end development and over two years of experience as a graphic designer in an advertising agency. I have completed front-end development courses on Udemy and further honed my skills at the Armenian Code Academy. I am passionate about learning new technologies and problem-solving. I have practical experience with project management tools like Trello and have contributed to several projects, including developing a Jira analogue. You can find my work on GitHub, where I continuously strive to improve through hands-on projects.
